TEXT:

The First Property **Insurance** Claims Management System And Network OREM, UTAH, JAN. 3, 1997 -- The property **insurance** industry's first full-circle, realtime claims management system and network -- a system that was developed at the specific request of a top-five property **insurer** -- is now available to other **insurance** companies and to independent adjusters and builders. The XactNet Claims Information System (CIS) is an important development that will help **insurers** reduce costs, settle claims faster and more accurately, and improve customer service, according to James Loveland, **Xactware** Inc. president. **Xactware** is a leading provider of software, databases and support services to the property **insurance** , remodeling/repair and reconstruction industries. "We've proven the enormous advantages of the XactNet system during a year of realworld use by USAA, a top-five property **insurance** company," Loveland said. "We've learned that it can significantly reduce the cost of settling a claim, the time needed to process a claim, and the time it takes to complete the repairs."

Important increases in control and savings " **Xactware** 's XactNet, in combination with PRISM's contractor network services, has given us important increased claims control, management and cost reductions," said Steve Marlin, USAA Assistant Vice President, Property Claims Policy. USAA was the first major property **insurer** to adopt XactNet. PRISM is the third-party administrator for a national network of USAA-approved contractors. The "front end" of the XactNet system is Xactimate estimating software. Xactimate is the software most widely used by the **insurance** industry to estimate property damage repair and reconstruction. Six of the top 10 property **insurance** companies use Xactimate. Carriers who use Xactimate represent a combined 43 percent of net premium dollars written in the U.S. The "back end" is highly secure data servers and communications hubs that are operated by **Xactware** . The front end/back end combination gives XactNet users an immediate, turnkey claims management network at minimal cost. Any modem-equipped PC running Xactimate version 5.5 or above can connect immediately. XactNet system users simply log into the data server/communications hub using the communication module built into Xactimate (version 5.5 and above.) The system automates claims workflow by allowing **insurers** to pass assignments and estimates to/from staff adjusters and outside service providers. Assignments and estimates download automatically when an authorized user logs onto the network. The XactNet hub can also automatically send a fax notification of assignment to the addressee -- or beep that person's pager -- to **insure** the fastest possible notification. Every estimate that passes through the hub is subjected to a dynamic audit report: Any discrepancies between prices used in the estimate and the **insurer** 's price database are noted in an audit report that is automatically appended to each estimate. XactNet also provides monthly updates national-average claims information from all users. In addition, **insurers** can choose from a number of pre-formatted management reports. They can also download their company's claims database to create their own customized reports with a compatible report engine such as Crystal Report or Cognos' Power Play. For more information, pricing or a demonstration of the XactNet Claims Information System, call **Xactware** at 1-800-292-9228. **Xactware** provides innovative solutions and service to the property **insurance** and construction industries. **Xactware** products include Xactimate estimation software, the XactNet Claims Information System, XactAccount construction accounting software, XactValue **insurance** -to-value software, and market-specific and national databases of prices for construction materials and labor.

XactValue

Xactware Inc., the developer of the #1 estimating system, presents XactValue, ITV software that uses the same Xactware accuracy that the industry has come to expect.

Packaged in an easy-to-use Windows-based program, XactValue provides the detail needed to establish accurate ITV coverage.

Up to 70 percent of homeowners are underinsured, costing millions in lost premiums and unplanned indemnity costs each year.

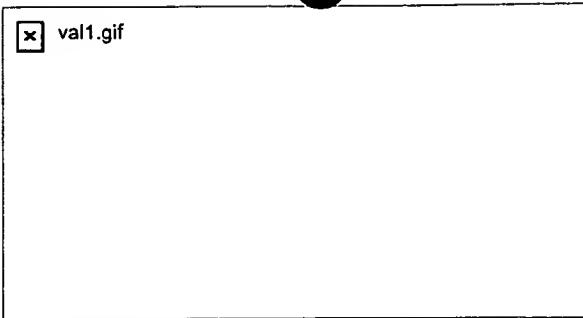

XactValue helps the industry cut those losses. Incorporating the same pricing methods used in loss estimating, XactValue allows for proper-value premiums by giving more accurate replacement costs.

Because XactValue is component-based, it builds the valuation on the realities of the construction process and market prices for that specific area. By eliminating rating systems and generalized formulas, XactValue provides the highest standard of accuracy in the industry.

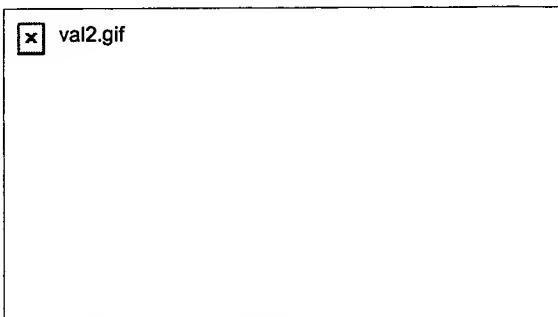

- Portable- can be used on a laptop computer for onsite valuations
- User graphics for better understanding and easier data entry
- Provides more detail for a more accurate replacement cost
- Utilizes 5-digit zip codes for area specific pricing
- Valuates the structure from the ground up
- Quick and easy method for gathering data

XactValue applies a logic that is unsurpassed in the industry!

Using area-specific price lists that are updated quarterly, XactValue calculates the value of a home based on actual reconstruction cost-not an arbitrary rating system.

1 Designed to complete a full valuation in less than 15 minutes, XactValue asks you questions about the home's construction. XactValue's comprehensive helps include definitions and graphics.

2 XactValue uses information entered about the home to calculate the amount of each component needed to build the home, like square yards of carpet and the board feet of lumber. XactValue provides you with the actual reconstruction cost, using current building prices.

Not only does XactValue provide a more accurate way to valuate homes, it also makes it easier to keep up with the claims process.

First, XactValue ensures that the home is insured-to-value. Second, renewals can be done simply by repricing the home's information, without redoing the entire valuation. Third, XactValue provides invaluable historical information that aids when settling total loss claims.

XactValue makes it easier for insurance companies like yours to collect proper-value premiums. From the company that developed Xactimate, XactValue is ITV software that's accurate, easy-to-use, and more complete.

For the best in ITV software, call 1-800-232-9228
